> Introduction

IDS-5011WG is an innovative 1 port RS232/422/485 to 802.11b/g WLAN and 1 port LAN device server. Users are able to configure IDS-5011WG by DS-Tool via LAN port or WLAN interface, but not simultaneously. Once LAN port is activated, WLAN interface will enter standby mode to minimize power consumption. Secondly, IDS-5011WG can simultaneously transfer data into 5 host PCs. This feature can assure all critical data that saved in different host PCs to avoid Ethernet break or host PCs failure. Thirdly, IDS-5011WG provides dual redundant power inputs both on DC power jack and terminal block. IDS-5011WG also provides NAT pass through function so that users are able to manage IDS-5011WG inside or outside NAT router. It is easy for different IP domain users to use the Switch. Therefore, IDS-5011WG is one of the best communication solutions for wireless application of serial devices.

> DS-Tool

In practical operation of serial device servers, Windows utility (DS-Tool) is supported. This utility is very helpful for you to manage and monitor all of industrial device servers on the industrial network.
